CONTENTS OF VOLUME 122

NUMBER 1, MAY 1, 1982

An Isotachophoretic Method for the Determination of Hypoxanthine in Serum <i>Bengt Gustavsson, Rose-Marie Olsson, and Johan Waldenström</i>	1
Colorimetric Determination of Tryptophan: The Effect of Light on the Acetic Anhydride Requirements <i>C. Nkonge and G. M. Ballance</i>	6
An Improved Method of Reconstitution of Adipocyte Glucose Transport Activity <i>Frances W. Robinson, Teresa L. Blevins, Kazuo Suzuki, and Tetsuro Kono</i>	10
Polyacrylamide Gel-Urea Electrophoresis of Cereal Prolamins at Acidic pH <i>Michel Laurière and Jacques Mossé</i>	20
Immunological Quantitation of Bacterial Cells Using a Partition Affinity Ligand Assay: A Model Study on the Quantitation of Streptococci B <i>T. G. I. Ling, M. Ramstorp, and B. Mattiasson</i>	26
An Assessment of Vertical Rotors <i>D. Rickwood</i>	33
The Determination of the Specific Activity of Picomolar Amounts of Long-Chain Acylcarnitine Esters <i>Richard Odessey and Kenneth V. Chace</i>	41
A Thermostable Cocktail for the Liquid Scintillation Counting of Heterogeneous Media <i>R. C. Noble, J. H. Shand, and H. F. Wagstaff</i>	47
A New Sensitive Method for the Quantitative Evaluation of the Hydroxyproline Isomers <i>Amin Bisker, Viviane Pailler, Alain Randoux, and Jacques Paul Borel</i>	52
Detection, Identification, and Partial Characterization of Serine Proteases and Esterases in Biological Systems <i>Clifford J. Scheiner and James P. Quigley</i>	58
A Simple Procedure for the Synthesis of High Specific Activity Tritiated (6S)-5-Formyltetrahydrofolate <i>Richard G. Moran and Paul D. Colman</i>	70
Fluorometric Oxidase Assays: Pitfalls Caused by Action of Ultraviolet Light on Lipids <i>Hilde E. Hirsch and Mary Ellen Parks</i>	79
Rapid Identification of <i>Escherichia coli</i> Transformed by pBR322 Carrying Inserts at the <i>Pst</i> I Site <i>William L. Boyko and Roger E. Ganschow</i>	85
Enzymatic Conversion of Deoxycytidine 5'-monophosphate to 5-Methyldeoxycytidine 5'-triphosphate <i>Richard Y.-H. Wang, Lan-Hsiang Huang, and Melanie Ehrlich</i>	89
Rabbit Liver Phosphorylase: Improvement of the Purification Procedure and Assay of the Inactive <i>b</i> Form <i>Mikihiko Kobayashi and Donald J. Graves</i>	94
Selective Precipitation of Orthophosphate from Mixtures Containing Labile Phosphorylated Metabolites <i>Barry R. Bochner and Bruce N. Ames</i>	100
Purification and Analysis of DNA from Wheat Chloroplasts Isolated in Nonaqueous Media <i>Catherine M. Bowman and Tristan A. Dyer</i>	108
Use of Percoll Density Gradient Centrifugation for Preparing Isolated Rat Hepatocytes Having Long-Term Viability <i>Christian Dalet, Max Fehlmann, and Pascale Debey</i>	119
A Time-Resolved Assay of Dopamine β -Hydroxylase Activity Utilizing High-Pressure Liquid Chromatography <i>Natalie B. Feilchenfeld, Helen W. Richter, and Walter H. Waddell</i>	124
Purification and Characterization of the Cytochrome P-448 Component of a Benzo(a)pyrene hydroxylase from <i>Saccharomyces cerevisiae</i> <i>Mahmood R. Azari and Alan Wiseman</i>	129

A Sensitive and Simple Assay of Starch Synthase Activity with Pyruvate Kinase and Luciferase	<i>Te May Ching</i>	139
Kinetic Studies of Normal and Variant Hypoxanthine Phosphoribosyltransferases in Intact Fibroblasts	<i>Theodore Page, Bohdan Bakay, and William L. Nyhan</i>	144
Novel Separation of Protein and Lymphocytes by Liquid Gel Chromatography during Exposure to Radiofrequency Radiation	<i>Robert P. Liburdy</i>	148
Determination of Plasma Hypoxanthine: A Comparison of High-Pressure Liquid Chromatographic and Oxygen Consumption Methods	<i>O. D. Saugstad, W. E. Wung, S. B. Howell, and L. Gluck</i>	159
Substrate-Containing Gel Electrophoresis: Sensitive Detection of Amylolytic, Nucleolytic, and Proteolytic Enzymes	<i>Terry L. Brown, Mei-Gang Yet, and Finn Wold</i>	164
High-Performance Liquid Chromatographic Determination of α -Keto Acids in Human Urine and Plasma	<i>Tokishi Hayashi, Hironori Tsuchiya, Hidemi Todoriki, and Hiroshi Naruse</i>	173
Purification and Some Properties of <i>sn</i> -Glycerol-3-phosphate Dehydrogenase from <i>Saccharomyces cerevisiae</i>	<i>Joseph R. Merkel, Martin Straume, Susan A. Sajer, and Robert L. Hopfer</i>	180
The Purification of SP ₁ - β (Pregnancy-Specific β_1 -Glycoprotein) Using Immobilized Triazine Dyes	<i>Kevin G. McFarthing, Sarojani Angal, and Peter D. G. Dean</i>	186
Determination of <i>N</i> -Methylurea: Comparison of Two Colorimetric Methods Using Diacetyl Monoxime or α -Isonitropropionophenone	<i>Woon Ki Paik and Sangduk Kim</i>	194
Quantitative Analysis of the Ring-Hydroxylated Metabolites of 2-Fluorenylacetamide by Gas-Liquid Chromatography	<i>M. Batardy-Grégoire, C. Razzouk, E. Evrard, and M. Roberfroid</i>	199
Incorporation of Lipids into Cellular Membranes—A Spin-Label Assay	<i>D. Marsh, R. Peillkofer, P. Hoffmann-Bleihauer, and K. Sandhoff</i>	206

NUMBER 2, MAY 15, 1982

Assay of the Enzymatic Hydrolysis of Pantetheine	<i>Carl Wittwer, Bonita Wyse, and R. Gaurth Hansen</i>	213
Prediction of the pH Dependence of the Separation of Weak Electrolytes by Ion-Exchange: Amino Acid Chromatography with Competitive Buffer Ion Eluents	<i>David M. LeMaster and Frederic M. Richards</i>	223
Preparative-Scale Isolation of Isotopically Labeled Amino Acids	<i>David M. LeMaster and Frederic M. Richards</i>	238
Quantitation of Individual Proteins by a Two-Stage Electrophoresis Procedure	<i>Alanna Ruddell and Marcelo Jacobs-Lorena</i>	248
The Facile Generation of Covalently Closed, Circular DNAs with Defined Negative Superhelical Densities	<i>C. K. Singleton and R. D. Wells</i>	253
A Highly Sensitive Assay for <i>S</i> -Adenosylmethionine by High-Performance Liquid Chromatography	<i>William J. Burke</i>	258
A Simple and Efficient Hybridization Technique for Quantitating Virus-Specific Ribonucleates in Polyoma Virus-Infected Cells	<i>Perry D'Obrenan, Vera Chlumecky, and John S. Colter</i>	262

Adenosine 5'-Monophosphate-Removing System in Fructose-1,6-bisphosphatase Assay Mixture: A New Approach	
<i>Peter Han, Grace Han, Henry McBay, and Joe Johnson</i>	269
New Reagents for the Introduction of the Thiomethyl Group at Sulfhydryl Residues of Proteins with Concomitant Spectrophotometric Titration of the Sulfhydryls: Methyl 3-Nitro-2-pyridyl Disulfide and Methyl 2-Pyridyl Disulfide	
<i>Takahide Kimura, Rei Matsueda, Yasushi Nakagawa, and E. T. Kaiser</i>	274
Ethane Exhalation as an Index of <i>in Vivo</i> Lipid Peroxidation: Concentrating Ethane from a Breath Collection Chamber	
<i>Glen D. Lawrence and Gerald Cohen</i>	283
Reduction of <i>N</i> -Acetyl Methionine Sulfoxide: A Simple Assay for Peptide Methionine Sulfoxide Reductase	
<i>Nathan Brot, Jean Werth, Daryl Koster, and Herbert Weissbach</i>	291
Substitution of Polybuffer for Ampholytes in Isoelectric Focusing	
<i>Aulikki Pekkala-Flagan and David E. Comings</i>	295
Peptide Mapping of Protein Bands from Polyacrylamide Gel Electrophoresis by Chemical Cleavage in Gel Pieces and Re-electrophoresis	
<i>Peter Sonderegger, Rolf Jaussi, Heinz Gehring, Katy Brunschweiler, and Philipp Christen</i>	298
Solid-Phase Radioimmunoassay for Estimation of Elastin Peptides in Human Sera	
<i>T. V. Darnule, M. McKee, A. T. Darnule, G. M. Turino, and I. Mandl</i>	302
Rapid Isolation of Microbial Milk-Clotting Enzymes by <i>N</i> -Acetyl (or <i>N</i> -Isobutyl)-pepstatin—Aminohexylagarose	
<i>Hideyuki Kobayashi, Isao Kusakabe, and Kazuo Murakami</i>	308
A More Sensitive Assay for Histone Deacetylase	
<i>Jaap H. Waterborg and Harry R. Matthews</i>	313
Rapid and Efficient Preparation of Free Amino Acids from Strong Acid Salts on Columns of Crosslinked Poly-4-vinylpyridine	
<i>Douglas M. Jewett and Richard L. Ehrenkaufer</i>	319
High-Sensitivity Amino Acid Sequence Determination of Radioactive Proteins Made <i>in Vivo</i> or <i>in Vitro</i>	
<i>Masaru Ryoji and Akira Kaji</i>	322
A Critical Reexamination of the Continuous Spectrophotometric Assay for Adenosine Deaminase	
<i>Joe Murphy, David C. Baker, Cynthia Behling, and Russell A. Turner</i>	328
A Rapid <i>in Situ</i> Deoxyribonucleic Acid Assay for Determining Cell Number in Culture and Tissue	
<i>Barbara Johnson-Wint and Steven Hollis</i>	338
Improved Colorimetric Procedure for Quantitating <i>N</i> -Carbamoyl- β -alanine with Minimum Dihydrouracil Interference	
<i>Thomas P. West, Mark S. Shanley, and Gerard A. O'Donovan</i>	345
Characterization of Intact and Trypsin-Digested Biosynthetic Human Growth Hormone by High-Pressure Liquid Chromatography	
<i>William J. Kohr, Rodney Keck, and Richard N. Harkins</i>	348
Separation of Phosphohydroxyamino Acids by High-Performance Liquid Chromatography	
<i>Jen Chen Yang, James M. Fujitaki, and Roberts A. Smith</i>	360
¹⁰³ Ruthenium Red, a Reagent for Detecting Glycosaminoglycans at the Nanogram Level	
<i>Steven S. Carlson</i>	364
Purification Technique for Enhancement of Field Desorption Mass Spectra of Phospholipids	
<i>Gordon W. Wood and Susan E. Perkins</i>	368

Characterization of Antigen-Enzyme Conjugates: Theoretical Considerations for Rate Nephelometric Assays of Immunological Reactivities	
<i>Gurusingham Sittampalam, George S. Wilson, and James M. Byers III</i>	372
Radiation Inactivation of Enzymes at Low Dose Rates: Identical Molecular Weights of Rat Liver Cytosolic and Lysosomal Neuraminidases	
<i>Guy Beauregard and Michel Potier</i>	379
A Sensitive Bioluminescent Immunoassay for Dinitrophenol and Trinitrotoluene	
<i>Jon Wannlund and Marlene DeLuca</i>	385
An Automatic Analytical System for Quantitative Determination of Uremic Middle Molecules	
<i>Peter Furst, Lena Zimmerman, Raymond Oulès, Veronique Yahiel, Christina Johnson, and Jonas Bergström</i>	394
Analysis of Metallonucleoside Hydrolysis by High-Pressure Liquid Chromatography	
<i>Michael J. Clarke, Katherine F. Coffey, Holly J. Perpall, and John Lyon</i>	404
Separation and Identification of Subpicomole Amounts of Methotrexate Polyglutamates in Animal and Human Biopsy Material	
<i>Glenn R. Krakower, Patricia A. Nylen, and Barton A. Kamen</i>	412
High-Performance Liquid Chromatography of Peptides on a Macroreticular Cation-Exchange Resin: Application to Peptide Mapping of Bence-Jones Proteins	
<i>Toshiaki Isobe, Tatsunori Takayasu, Nobuharu Takai, and Tsuneo Okuyama</i>	417
A Simple Method for the Qualitative Demonstration of Large and Small Plasmid Deoxyribonucleic Acids in Gram-Positive and Gram-Negative Bacteria	
<i>Jon M. Ranhand</i>	426
ERRATUM. Volume 119, Number 2, January 15, 1982: L. J. Berliner, J. Grunwald, H. O. Hankovszky, and K. Hideg, "A Novel Reversible Thiol-Specific Spin Label: Papain Active Site Labeling and Inhibition," pp. 450-455	433
AUTHOR INDEX FOR VOLUME 122	434

The Subject Index for Volume 122 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

INFORMATION FOR AUTHORS¹

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins when a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in triplicate to *Analytical Biochemistry, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101*. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. At least three copies should be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit such words as *novel, rapid, improved, simple, sensitive, efficient, convenient, new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words which help give readers an idea as to the usefulness of your paper with regard to their limitations of equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

¹ An extended Information for Authors appeared in Volume 115, Number 1, July 15, 1981. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125**, 255-260.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246-409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
